

In the Claims:

1. (Currently Amended) A method for integrating use of a portable image capture device into a workflow process, the method comprising:
 - initiating utilization of a portable image capture device with a workflow process, the workflow process including a template having at least one predetermined point at which data input, including captured image data, is expected;
 - directing collection of the data input by the portable image capture device; and
 - integrating the collected data input in the workflow process by automatically associating the collected data input with the template, thereby generating an output document.
2. (Currently Amended) The method of claim 1 wherein initiating utilization further comprises selecting ~~[[a]]~~ the template for the workflow process in the portable image capture device.
3. (Original) The method of claim 2 wherein directing collection further comprises prompting for performance of an image capture at the at least one predetermined point in the template.
4. (Original) The method of claim 3 wherein directing collection further comprises prompting for entering of any voice data and text data at the at least one predetermined point in the template.
5. (Currently Amended) The method of claim 4 wherein integrating the collected data input further comprises inserting the image ~~captured~~ capture and the voice data or the text data ~~input~~ at the at least one predetermined point ~~[[of]]~~ in the template.
6. (Original) The method of claim 5 wherein inserting any voice data further comprises transcribing voice data to text data.
7. (Currently Amended) The method of claim 5 further comprising providing the output document for a next step in the workflow process.

8. (Original) The method of claim 1 wherein initiating utilization further comprises selecting a workflow activity for the workflow process in the portable image capture device, the workflow activity associated by an identifier with a document template, the template identifier having an associated set of input identifiers for data input.
9. (Original) The method of claim 8 wherein directing collection further comprises prompting for performance of an image capture at the at least one predetermined point.
10. (Original) The method of claim 9 wherein directing collection further comprises prompting for entering of any voice data and text data at the at least one predetermined point.
11. (Currently Amended) The method of claim 10 wherein integrating the collected data input further comprises associating the set of input identifiers for the selected workflow activity with the image ~~captured~~ capture and the voice data or the text data ~~input~~.
12. (Original) The method of claim 11 wherein inserting any voice data further comprises transcribing voice data to text data.
13. (Original) The method of claim 11 further comprising providing the set of input identifiers for a next step in the workflow process.
14. (Currently Amended) A system for automated integration of image acquisition and incorporation into a workflow process, the system comprising:
 - a computer system for performing a workflow process, the workflow process including a template having at least one predetermined point at which data input, including captured image data, is expected; and
 - a portable image capture device capable of at least digital image capture, the portable image capture device directing collection of the data input and integrating the collected data input into the workflow process by automatically associating the collected data input with the template, thereby generating an output document.

15. (Original) The system of claim 14 wherein the portable image capture device directs collection by prompting for performance of an image capture at the at least one predetermined point.
16. (Original) The system of claim 15 wherein the portable image capture device further directs collection by prompting for entering of any voice data and text data at the at least one predetermined point.
17. (Currently Amended) The system of claim 16 wherein inserting any voice data further comprises transcribing the voice data to text data.
18. (Currently Amended) The system of claim 16 wherein the portable image capture device integrates collected data input by inserting the image ~~captured~~ capture and the voice data or the text data ~~input~~ at the at least one predetermined point of a document.
19. (Original) The system of claim 18 wherein the portable image capture device further provides the document to the computer system for a next step in the workflow process.
20. (Currently Amended) The system of claim 16 wherein the portable image capture device integrates the collected data input by associating a set of input identifiers for a selected workflow activity with the image ~~captured~~ capture and the voice data or the text data ~~input~~.
21. (Currently Amended) The system of claim 20 wherein the portable image capture device provides the set of input identifiers, the collected data input, ~~[[the]]~~ and a template identifier to the computer system for a next step in the workflow process.
22. (Currently Amended) A portable image capture device containing program instructions on a computer readable medium for automation of image integration into a workflow process, the program instructions comprising:

directing collection of data input of at least captured image data for a workflow process, the workflow process including a template having at least one predetermined point at which the at least captured image data[[,]] is expected; and

integrating the collected data input into the workflow process by automatically associating the collected data input with the template, thereby generating an output document.

23. (Original) The portable image capture device of claim 22 wherein directing collection further comprises prompting for entering of any voice data and text data at the at least one predetermined point.

24. (Currently Amended) The portable image capture device of claim 23 wherein integrating the collected data input further comprises inserting the at least captured image data and the voice data or the text data ~~input~~ at the at least one predetermined point of a document.

25. (Currently Amended) The portable image capture device of claim 23 wherein integrating the collected data input further comprises associating a set of input identifiers for a selected workflow activity with the at least captured image data and the voice data or the text data ~~input~~.
